

Epidemiology and Drug Safety Research

For more than 30 years, Analysis Group has worked with prominent clinicians, academics, and industry thought leaders to develop innovative solutions for our health care clients across North America, Europe, and emerging markets.

As described further below, Analysis Group will delightedly make three podium and four poster presentations at the 2016 ICPE conference. Our podium presentations will examine the impact of paliperidone palmitate versus oral atypical antipsychotics, the comparative hepatotoxicity of echinocandins, and the epidemiology of advanced pancreatic neuroendocrine tumors in the era of targeted therapy. In addition, our research posters will explore aspects of thalassemia intermedia in the US, adult patients with sporadic angiomyolipoma in the Netherlands, the impact of long acting reversible contraceptive use in a commercially insured population, and patient characteristics and overall survival in the metastatic castration-resistant prostate cancer community setting.
